MSDF SDCOE Ed-Fi Transcript Prototype: Linux Deployment Guide

Revision July 2021
San Diego County Office of Education, Innovation and ITS (datascience@innovatesd.net)
Application development: Leapfrog Technology, Inc. (DBA Eduphoric)

Contents

1. Machine minimum specifications

```
RAM: 2GB
Hard Drive: 15GB
Operating System: Ubuntu 20.04
Other Dependencies:
     node v14.15.1
     npm 6.14.8
     pm2 4.5.0
     nginx 1.18.0
```

2. Deployment Steps

2.0. Adding a new SSH key to your GitHub account

Follow the instructions in the documentation given below.
Adding SSH Key

Clone the repository and move the project in /opt/sdcoe directory

```
$ git clone git@github.com:leapfrogtechnology/sdcoe-transcript.git
$ sudo mv sdcoe-transcript/ /opt/sdcoe-transcript
```

2.1. Install curl and Node.JS with the following commands

```
$ sudo apt install curl
$ curl -sL https://deb.nodesource.com/setup_14.x -o nodesource_setup.sh
$ sudo bash nodesource_setup.sh
$ sudo
```

Check if node and npm are installed and running

```
$ node -v
$ npm -v
```

2.2. Install ganache-cli and @rsksmart/ethr-did-utils

```
$ yarn global add ganache-cli

$ git clone git@github.com:rsksmart/ethr-did-utils.git
```

2.3. Install build essential package for some npm packages to run

```
$ sudo apt install build-essential
```

2.4. Install yarn globally

```
$ sudo npm i -g yarn
```

2.5. Run ganache-cli and deploy the smart contract

a. Install ganache-cli

```
$ nohup ganache-cli -p 8545  -m SDCOE-project >
/var/logs/sdcoe/sdcoe-ganache-cli.log &
```

b. Deploy ethr-did-registry smart contract

```
$ cd ethr-did-utils
$ PORT=8545 yarn deploy-registry
```

2.6. Add .env files in every sub folders

See example .env files, or reference .env files in Windows deployment guide for more information.

2.7. Database

a. Install postgres

```
$ sudo apt update
$ sudo apt install postgresql postgresql-contrib
```

b. Create new user and set credentials

```
$ sudo -su postgres
$ psql postgres
$ \password

Note: The above commands is used to set password for default user
postgres
```

c. Create a database named SDCOE on PostgreSQL terminal

```
$ CREATE DATABASE SDCOE;
```

d. Populate the .env files with necessary credentials.

```
$ cp /opt/sdcoe/transcript-api/.env.example
/opt/sdcoe/transcript-api/.env

$ nano .env
Then edit the fields
```

e. Make migration and add seed data

```
$ yarn migrate
$ yarn seed
```

2.8. Start PM2 service

Note: this step might not be required (almost sure. It's not required :D)

Start pm2 on startup

```
$ sudo env PATH=$PATH:/usr/bin /usr/lib/node_modules/pm2/bin/pm2 startup
systemd -u {username} --hp /home/{username}

$ pm2 save
```

Start pm2 service for current user

```
$ sudo systemctl start pm2-{username}
```

2.9. Install nginx

```
$ sudo apt update

$ sudo apt install nginx

$ sudo ufw allow 'Nginx HTTP'

$ sudo ufw enable
```
